**There's no way you can
have an AI system
that's humanlike that
doesn't have language
at the heart of it.**

JOSH TENENBAUM

Professor of cognitive science and computation at MIT

Topic: Products
Opinion: positive

Products are great and all ok. But as soon as you need the customer service... forget about any help. After 3 hours waiting to get through, she said that she is new and doesn't know how to help me... she'll route me to someone else who could help... and she just hung up.....
Seriously.. The sofa is not worth the hassle!!

Wellbeing Chatbot

SYMO

AI-powered student wellbeing app tailored for students to

- better understand, manage and improve their wellbeing
- access personalised resources and exercises to tackle the cause of stress and anxiety such as exam, financial issue, relationships
- find pathway to further support in crisis situation

The app can be **tailored** for each university / college to benefit their students.

Challenges with Developing SYMO

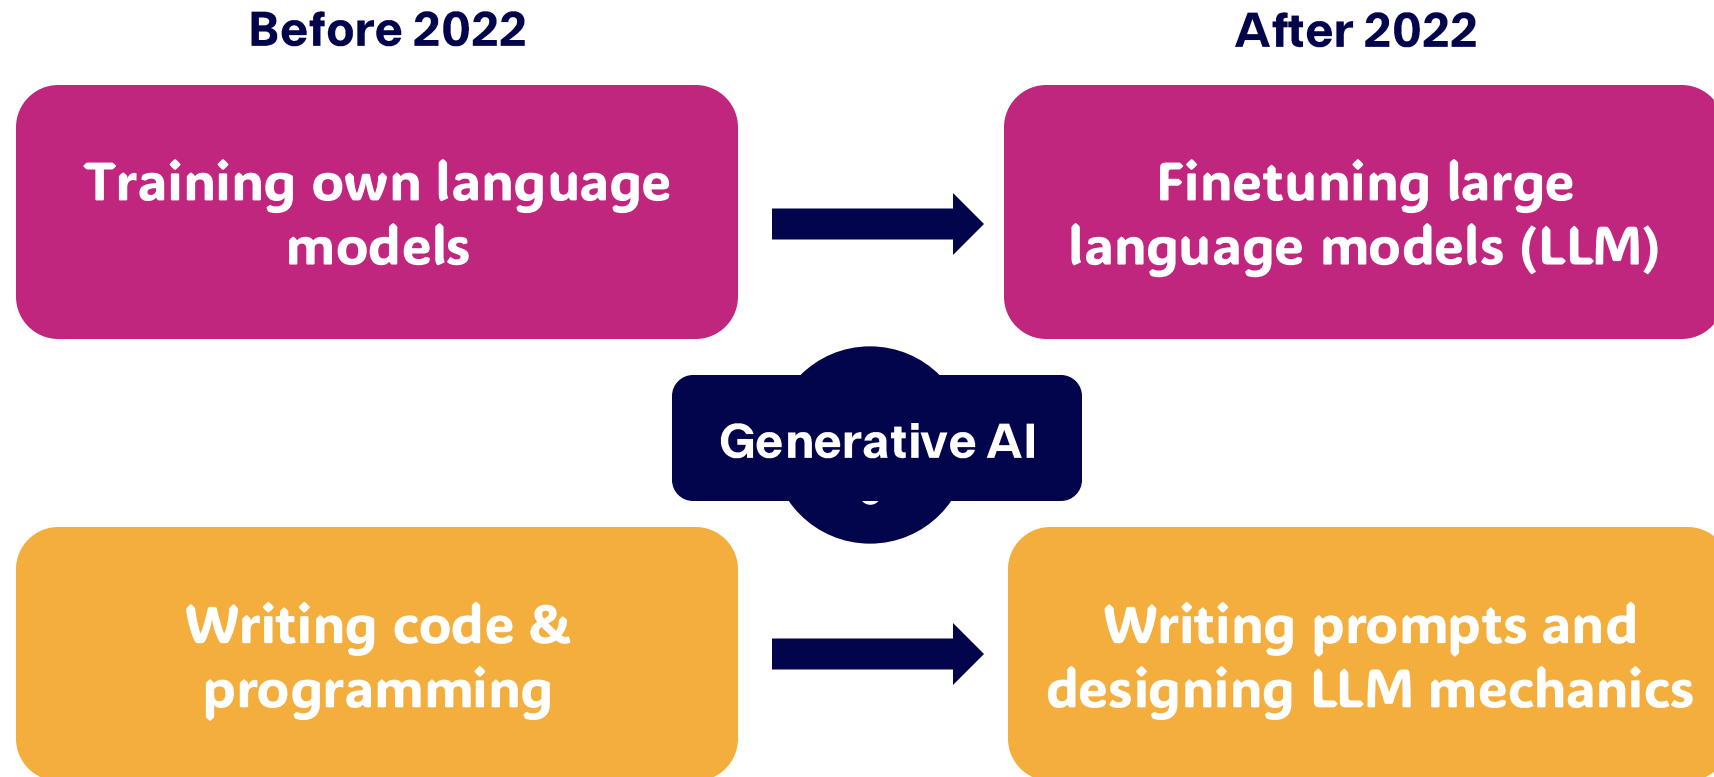

How can we make sure the chatbot really understands each student's emotional wellbeing?

How do we teach the system to recommend resources that truly help each student in their individual needs?

Have we taken into consideration students from minority groups?

How do we make sure that a human can take over when the AI fails?

Research & Development is Changing

What does this mean?

*TAAFT.com for short

THERE'S AN AI FOR THAT^{®*}

What makes human human?

Can the AI system be made fair?

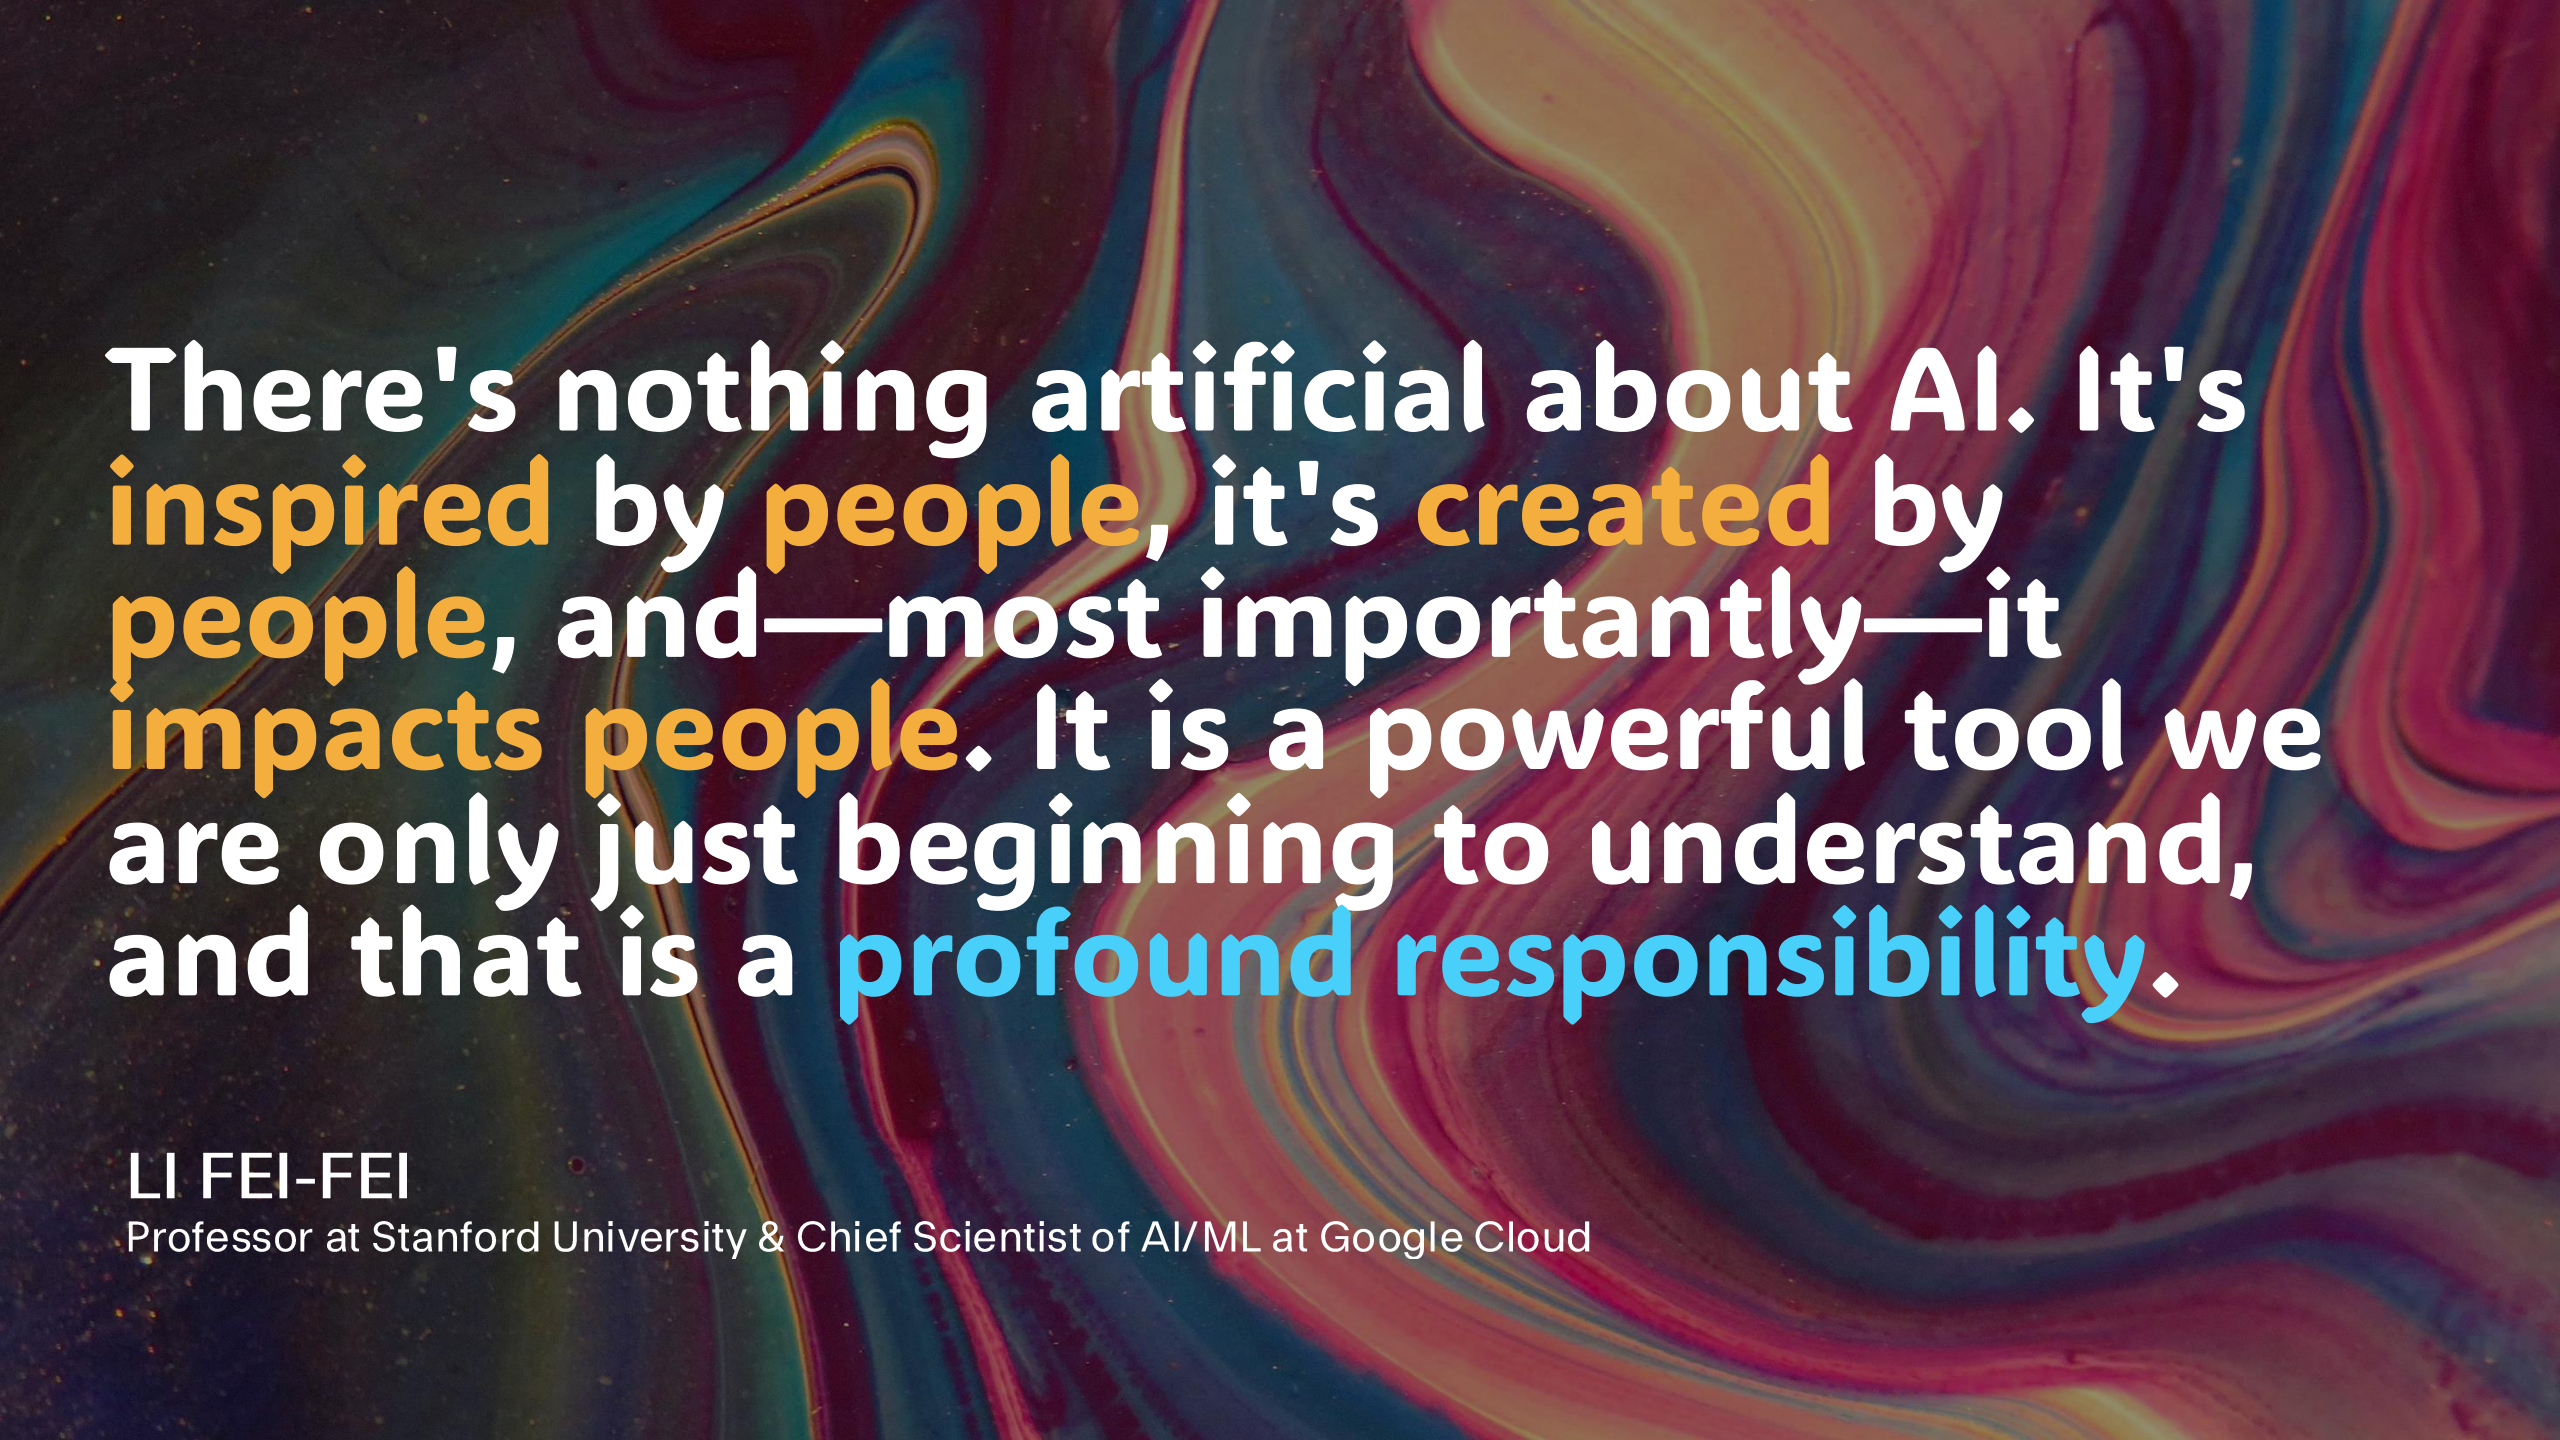

How would it impact other people & environment?

How far can the AI system achieve?

The background is a vibrant, abstract composition of swirling colors. On the left, there's a dark, starry space-like area. The rest of the image is filled with fluid, marbled patterns in shades of deep blue, teal, purple, and magenta. A central rectangular area is highlighted with a white border, containing a warm, orange-brown gradient. The text is overlaid on these elements.

It's Your Turn Now

Design your Dream Learning AI

There's nothing artificial about AI. It's **inspired by people**, it's **created by people**, and—most importantly—it **impacts people**. It is a powerful tool we are only just beginning to understand, and that is a **profound responsibility**.

LI FEI-FEI

Professor at Stanford University & Chief Scientist of AI/ML at Google Cloud
